

Gapless glass-metal sandwich technology

The new patented construction with the advantages of both free-standing and vacuum chamber construction:

- minimized outside dimensions
- minimized gap between guide to vacuum housing
- extra high stability
- low 1×10^{-4} rad surface waviness
- equivalent to vacuum housing
- additional gamma shielding
- flexible design - straight, tapered, elliptical, curved
- easy and safe to apply shielding close around the guide
- fast installation procedure
- easy and fast replacement
